ANUPRITA KAPLE

New York, NY (open to relocation) | +1 (607) 697-4233 | anuprita1009@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

Operations and project leader with 3+ years delivering capital planning, continuous-improvement, and cross-functional programs across global manufacturing. Track record of $6M in projected capex avoidance across 63 plants, zero-delay delivery of a 63-vehicle EV prototype program across a 4-country supply chain, and 92% plant adoption of a new planning platform within 7 months. Cornell M.Eng in Engineering Management with hands-on consumer research for Nestlé USA; skilled in SAP, Power BI, Palantir, Excel, and Python.

CORE COMPETENCIES

- **Project & Capital Planning:** CAPEX estimation, budget and schedule control, scope and risk management, line/labor/shift planning, footprint and material-flow design, Continuous Improvement: root-cause analysis, OEE/TEEP/AUR, value stream mapping, Kaizen/5S, line balancing, cycle/takt-time optimization, scrap reduction
- **Procurement & Supply Chain:** procurement, supplier management, contract management, materials management, logistics, expediting, inventory control, FIFO, Negotiations & Contracts
- **Analytics & Insights:** Power BI dashboards, Excel modelling, KPI tracking, executive storytelling
- **Systems & Tools:** SAP (MII, DMC), Palantir Foundry, Power BI, Python, R, SQL, AI workflow automation, autonomous AI agents, automated workflows, MCP integrations, prompt engineering, Claude code APIs

WORK EXPERIENCE

Forvia — *Senior Program Engineer, Technical Program Management (CEER)* | Riyadh, Saudi Arabia Dec 2024 – May 2025

- Led cross-functional delivery of 63 EV prototype vehicles in 80 days for a zero-buffer JIT line, driving supplier coordination across Production (Riyadh), Manufacturing (China), and Logistics teams in a 4-country supply chain with zero schedule delays.
- Led materials management for $2M in inventory across 116 components using a designed FIFO storage layout and daily demand reconciliation, resolving shared-component dependencies across competing on-site suppliers to sustain 100% parts availability.
- Built an Excel traceability tracker applying scrap-rate and customs-delay analysis to expedite at-risk parts through the China–Saudi logistics pipeline, serving as primary escalation point for cross-border issues and earning 5-star client satisfaction.

Forvia — *Senior Industrial Development Engineer, Digital Transformation (CAPLA)* | Pune, India Oct 2023 – Dec 2024

- Built CAPEX estimates and manufacturing feasibility models (AME) — line, labor and shift planning, footprint finalization, MBOM and material-flow design, across 3 new program acquisitions, securing a Japanese OEM program win.
- Deployed a Palantir/SAP capacity-planning platform across 63 plants, using SCADA data to synchronize 1,800 assets and correct 830 (46%), enabling data-backed capex decisions.
- Built the data-driven business case that won steering-committee buy-in to replace a single-contractor-dependent legacy system at the Pretoria plant with standardized SAP DMC, eliminating single-person dependency risk.
- Diagnosed 3 systemic root causes (inflated cycle times, load imbalance, mis-booked production) and drove governance corrections across 63 plants, driving $6M in projected 2024 savings through avoided capex and optimized utilization.
- Delivered platform training to 100+ employees, enabling 58 of 63 plants to independently adopt standardized reporting within 7 months, and achieved 100% equipment alignment across 20 historically resistant China plants (~700 machines) without formal authority through a redesigned bilingual engagement model.

Forvia — *Design & Development Engineer* | Pune, India Jun 2022 – Oct 2023

- Delivered 2D/3D CAD modelling (CATIA V5) for centre console and instrument panel components on the Citroën face-lift program, coordinating drawing, solid-part releases through Dassault's PLM platform to meet program milestones.
- Managed the engineering-change-request pipeline across ~20 ECRs/month across 5+ programs, validating design changes against OEM requirements and manufacturing constraints, achieving zero rework in trial production.

Larsen & Toubro — *Project Planning & Execution Intern* | Surat, India Sep 2021 – Jan 2022

- Built predictive distortion-control models for tube sheet welding, cutting the 144-hour welding cycle by ~28% (~40 hours/unit) and averting ~$5K rework per sheet; recognized with a Certificate of Appreciation.

ACADEMIC PROJECTS

Hidden Capacity Finder — AI-Assisted Capacity Decision Tool *Link* Jan 2026 – May 2026

- Led Built an AI-assisted capacity decision tool (Python, Streamlit, Claude API) that finds hidden line capacity in sample SAP and PLC data before a ~$1M equipment purchase, flagging a bottleneck press at 1,098 sets/day against 1,250 demand, with daily Claude-drafted Slack alerts.

Career Ops Agent — Autonomous Job-Intelligence System *Link*

- Architected a 3-module autonomous job-intelligence system covering 100+ companies across 6 ATS platforms on a twice-daily schedule, replacing ~4 hours of daily manual research with automated, fit-filtered reporting and eliminating manual intervention.

EDUCATION

Cornell University, College of Engineering — M.Eng, Engineering Management Aug 2025 – May 2026

President, Cornell Graduate Product Development Club **(Link)** ; *Fellow, Cañizares Center for Emerging Markets, Cornell* **(Link)**

Vishwakarma Institute of Technology — B.Tech, Mechanical Engineering Aug 2018 – May 2022
